PRacticANDO

Resolvamos esta sencilla división

• Como el primer numero del dividendo es igual al divisor lo separamos y buscamos en la tabla del 2 que numero multiplicado por 2 es igual a 2 o el más aproximado.... exacto es el 1, así que colocamos el 1 en el lugar del cociente y multiplicamos 1×2 y lo restamos de 2 y decimos de 2 a 2 van cero y ubicamos el cero debajo del 2.

• Bajamos el 4 y buscamos en la tabla del 2 que numero multiplicado por 2 es igual a 4 o el más aproximado.... exacto es el 2, así que colocamos el 2 en el lugar del cociente y multiplicamos 2×2 y lo restamos de 4 y decimos de 4 a 4 van cero y ubicamos el cero debajo del 4.

• Bajamos el 5 y buscamos en la tabla del 2 que numero multiplicado por 2 es igual a 5 o el más aproximado.... exacto es el 2, así que colocamos el 2 en el lugar del cociente y multiplicamos 2×2 y lo restamos de 5 y decimos de 4 a 5 sobre 1 y ubicamos el 1 debajo del 5.

Finalmente decimos:

$$245 \div 2 = 122 \text{ y sobra } 1$$

$$\begin{array}{r} 245 | 2 \\ 04 \quad \underline{-} \\ 05 \quad \quad | \end{array}$$

¿COMO MULTIPLICAR?

Para multiplicar dos números de varias cifras colocamos el multiplicando y debajo el multiplicador, trazando una raya por debajo de ambos. Comenzamos a multiplicar, de derecha a izquierda, la primera cifra del multiplicador por cada una de las cifras del multiplicando y vamos colocando las unidades de cada producto debajo de la raya, también de derecha a izquierda, y las decenas se las sumamos al siguiente producto.

La **MULTIPLICACIÓN** es una suma de sumandos iguales.

Hacemos una multiplicación cuando sumamos un número n k veces. El signo que representa la multiplicación es \times que significa las **suma**.

Los números que se multiplican se llaman **FACTORES**. El primer factor se llama **MULTIPLICANDO** y el segundo, **MULTIPLICADOR**. El resultado que obtenemos se llama **PRODUCTO** de la multiplicación.

PROPIEDADES DE LA MULTIPLICACIÓN

Propiedad conmutativa:

Si en una multiplicación de dos o más factores se cambia la forma de agruparlos, se obtiene el mismo resultado.

$$(3 \times 6) \times 4 = 3 \times 4 + 6 \times 4$$

Propiedad distributiva:

de la multiplicación respecto de la suma:

Para multiplicar una suma por un número, se puede multiplicar cada sumando por el número y sumar los productos obtenidos.

$$(5 + 6) \times 4 = 5 \times 4 + 6 \times 4$$

La propiedad distributiva de la multiplicación se aplica también respecto de la resta. Para multiplicar un número por una resta, se puede multiplicar el número por el minuendo y por el sustraendo y después restar los productos obtenidos.

$$(9 - 4) \times 3 = 9 \times 3 - 4 \times 3$$

A black and white line drawing of a friendly-looking bear. The bear has a large, bushy head with a dark brown snout and a pink tongue sticking out slightly. It has two small ears on top of its head. The bear is wearing a light-colored vest over a white shirt. On the vest, there is a large, bold '3 x' followed by a list of multiplication facts. The vest has two large circular pockets on the sides.

CONSTRUYENDO LAS TABLAS

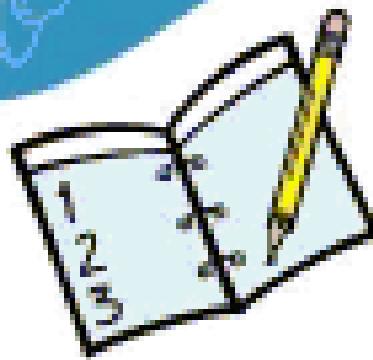

Ya vimos que la multiplicación es sumar varias veces el mismo número. Ahora construyamos las tablas ordenadamente.

SUMANDO Y MULTIPLICANDO

COMO TE DAS CUENTA,
MULTIPLICAR ES SUMAR
VARIAS VECES EL MISMO
NUMERO.

PRACTIQUEMOS CON
ALGUNOS EJERCICIOS

Completa las siguientes multiplicaciones como muestra el ejemplo:

$$2 \times 3 = 6$$

$$2 + 2 + 2 = 6$$

$$4 \times 2 = \boxed{}$$

$$\boxed{} + \boxed{} = \boxed{}$$

$$7 \times 2 = \boxed{}$$

$$\boxed{} + \boxed{} = \boxed{}$$

6

$$2 \times 6 = \boxed{}$$

$$2 + 2 + 2 + 2 + 2 + 2 = \boxed{}$$

$$\times 7 =$$

$$2 + \boxed{} + 2 + \boxed{} + 2 + 2 + 2 =$$

$$2 \times 8 = \boxed{}$$

$$2 + \bullet + \bullet + 2 + \bullet + 2 + 2 + 2 = \boxed{}$$

$$2 \times 9 = \boxed{}$$

$$2 + 2 + 2 + 2 + 2 + 2 + 2 + 2 + 2 = \boxed{}$$

$$2 \times \begin{array}{c} \text{gift} \\ \text{gift} \\ \text{gift} \\ \text{gift} \\ \text{gift} \\ \text{gift} \end{array} = \boxed{}$$

$$2 + 2 + 2 + 2 + 2 + 2 + 2 + 2 + 2 = \boxed{}$$

MULTIPLICAR POR UN MULTIPLICADOR

Lo primero que debemos saber, son las partes que componen una multiplicación, las cuales se conforman por el **MULTIPLICANDO**, que es el número que vamos a multiplicar el **MULTIPLICADOR**, que es el numero por el que lo vamos a multiplicar y el **PRODUCTO o RESULTADO**, que es el numero obtenido luego de multiplicar un numero en una cantidad determinada de veces. veamos el orden en el ejemplo siguiente:

$$\begin{array}{r} 24 \\ \times 5 \\ \hline 120 \end{array}$$

División entre un divisor

Una división se compone de las siguientes partes **DIVIDENDO**, que es el número que vamos a dividir el **DIVISOR**, que es el numero entre el que lo vamos a dividir, el **COCIENTE o RESULTADO**, que es el numero obtenido luego de dividir un numero entre una cantidad determinada de veces y el **RESIDUO** que es el numero sobrante de la division o indivisible veamos el orden en el ejemplo siguiente:

$$\begin{array}{r} \text{DIVIDENDO} \\ 35 \\ \hline \text{DIVISOR} & 4 \\ \hline \text{RESIDUO} & 3 \\ \text{COCIENTE} & 8 \end{array}$$

La MULTIPLICACIÓN

La multiplicación es una operación matemática, que consiste en sumar varias veces un mismo número.

$$3 \times 4$$

Así:

indica que tenemos que sumar el número **3**, durante **4** veces, es decir:

$$3 + 3 + 3 + 3$$

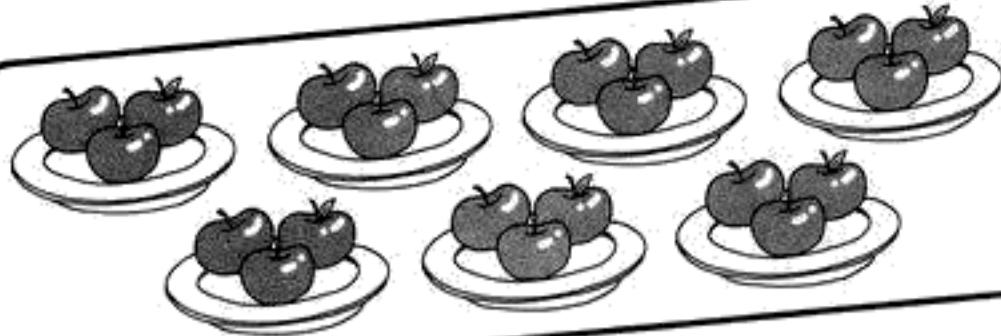

Por tanto, la multiplicación se puede considerar como una suma repetida.

Comprobamos que el resultado es el mismo:

$$3 \times 4 = 12$$

$$3 + 3 + 3 + 3 = 12$$

¿COMO DIVIDIR?

Consiste en averiguar cuántas veces un número contiene a otro número, las reglas son las siguientes:

- Se divide de izquierda a derecha,
- se reparten las cifras del dividendo entre las del divisor, se divide utilizando las tablas del multiplicar al revés es decir $15 \div 3$ equivale a buscar en la tabla del 3 un número que su resultado sea 15 o el más cercano,
- Se multiplica esta cifra del cociente por el divisor y se resta del dividendo; si no se puede restar se intenta con un número menor.
- Se toma la siguiente cifra del dividendo inicial y se repite el proceso hasta haber tomado todas las cifras.

veamos el ejemplo:

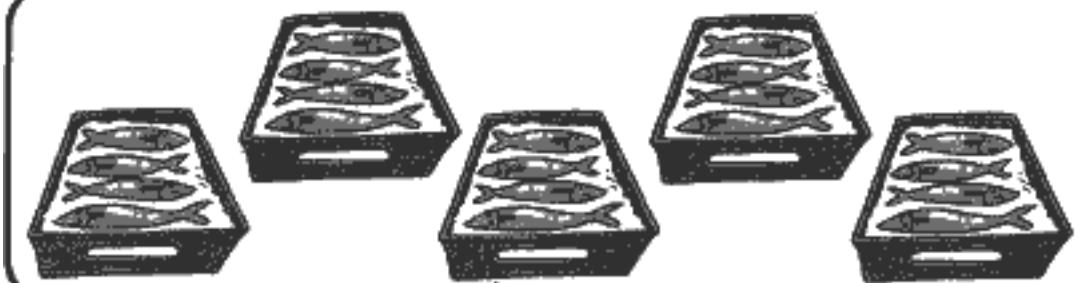

$$\begin{array}{r} 7 \text{ | } 3 \\ 1 \quad \quad \quad 2 \end{array}$$

$2 \times 3 = 6$ a 7 SOBRa 1

¿COMO MULTIPLICAR NUMEROS MÁS GRANDES?

Al igual que las multiplicaciones de multiplicandos de 2 cifras comenzamos a multiplicar, de derecha a izquierda, la primera cifra del multiplicador por cada una de las cifras del multiplicando y vamos colocando las unidades de cada producto debajo de la raya, también de derecha a izquierda, y las decenas se las sumamos al siguiente producto y así sucesivamente con las otras cifras que tenga el "multiplicando"

$$\begin{array}{r} 41 \\ \times 362 \\ \hline 2534 \end{array}$$

$$7 \times 2 = 14$$

subo el 1 al producto siguiente

$$7 \times 6 = 42 + 1 = 43$$

vienen del producto anterior

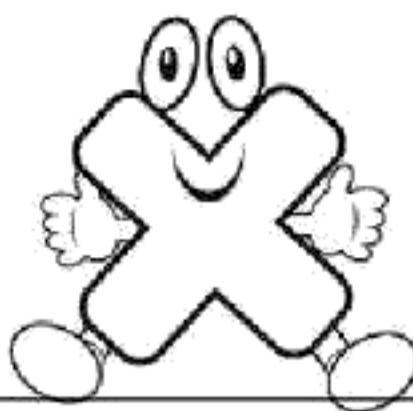

subo el 4 al producto siguiente

$$7 \times 3 = 21 + 4 = 25$$

La división es una operación matemática, elemental, inversa de la multiplicación y puede considerarse también como una resta repetida. así como la multiplicacion aumenta de forma sucesiva, la división disminuye de la misma forma.

La MULTIPLICACIÓN es una suma de sumandos iguales. Hacemos una multiplicación cuando sumamos un número n k veces. El signo que representa la multiplicación es \times que se lee **por**.

Los números que se multiplican se llaman FACTORES. El primer factor se llama MULTIPLICANDO y el segundo, MULTIPLICADOR. El resultado que obtenemos se llama PRODUCTO de la multiplicación.

PROPIEDADES DE LA MULTIPLICACIÓN

Propiedad conmutativa:

Si en una multiplicación de dos o más factores se cambia la forma de agruparlos, se obtiene el mismo resultado.

$$(3 \times 6) \times 4 = 3 \times (6 \times 4)$$

Propiedad asociativa:

Si en una multiplicación de tres o más factores se cambia la forma de agruparlos, se obtiene el mismo resultado.

$$(3 \times (6 \times 4)) \times 2 = 3 \times 6 \times (4 \times 2)$$

Propiedad distributiva:

de la multiplicación respecto de la suma:

Para multiplicar una suma por un número, se puede multiplicar cada sumando por el número y sumar los productos obtenidos.

$$(5 + 6) \times 4 = 5 \times 4 + 6 \times 4$$

La propiedad distributiva de la multiplicación se aplica también respecto de la resta. Para multiplicar un número por una resta, se puede multiplicar el número por el minuendo y por el sustraendo y después restar los productos obtenidos.

$$(9 - 4) \times 3 = 9 \times 3 - 4 \times 3$$
